Canon Broadcast Lens Technology

Optical Performance

Superb Optical Materials to Produce a High-Performance Lens

Fluorite · UD Glass · Hi-UD Glass

Unlike conventional optical glass, Fluorite has remarkably low dispersion properties. Realizing the effectiveness of Fluorite glass, Canon has put it to practical use in many lenses. primarily in the anterior section of zoom lenses to help correct telephoto chromatic aberration.

Both UD^{*1} glass and Hi-UD glass^{*2} have dispersion properties similar to Fluorite and are effective for correcting chromatic aberration. Due to its high refractive characteristics, Hi-UD glass is especially known for its spherical aberration correction. Used in the anterior and zooming sections of a lens, Hi-UD glass is effective for controlling aberration fluctuation seen when focusing and zooming.

- *1 UD-Ultra Low Dispersion.
- *2 Hi-UD High Index Ultra Low Dispersion.

Chromatic Aberration Correction Comparison Common Optical Glass Fluorite Crystal Element Small Chromatic Aberratio

Air Sphere Coating

In the context of HDR Optical imaging, Air Sphere Coating (ASC) technology is a critically important new innovation in broadcast field lenses. This is a Canon-developed technology that is an additional layer deposited on top of the normal multilayer coatings that are used to minimize numerous internal reflections that conspire to lower light transmission efficiency and to contaminate deep black reproduction. ASC is an ultra-low refractive index silicon dioxide film that includes microscopic air spheres having a sub-nanometer diameter arranged in regular structure. Because these spheres are microscopic when

comparing to the wavelength of visible light and as they are in an ordered array, light does not scatter. In combination with the multilayer coatings, ASC achieves far lower reflectance and significantly reduces flare and ghosting.

Bokeh Effect

When shooting in macro, the focus position of the lens can be changed as the focal length is adjusted, when using the optional MCJ-S02 Macro Controller, creating a bokeh effect. This built-in feature can be utilized to support special techniques in which the focus position can be shifted within the same shot just by using the Macro Controller, allowing for subtle creative defocus effects. This can help provide a degree of creativity when shooting live events such as a concert.

Please see page 16 for Bokeh Effect Controller configuration.

High Quality, Compact Size and Weight

Large Aperture Aspheric Lens

Spherical aberration will increase as the diameter of a spherical lens increases. However, aspheric lenses form an ideal shape for aberration correction and are the desired lens type for improving optical performance. As they are more compact, aspheric lenses reduce the weight of the entire lens system. Through its optical design and large aperture processing techniques, Canon has developed compact, large aperture, high magnification field zoom aspheric lenses. As a result of this development, all highmagnification field zoom lenses released since 2000 have a constant total lens length regardless of zoom ratio.

Focus Breathing Suppression

Constant Angle Focusing System (CAFS)

CAFS is a technology that suppresses view-angle fluctuation (breathing) while focusing. The Zooming Effect of Focus is the phenomenon where the picture size (angle of view) changes when focusing. Canon's 32-bit CPU calculates and controls the zoom when focusing in order to counteract this phenomenon. As a result of CAFS, the UHD-DIGISUPER and DIGISUPER Series has zero Zooming Effect of Focus.

Advanced Design Technology to Help Minimize Various Aberrations

Image Stabilizer (IS)

Canon launched its first field zoom lens with a shift type anti-vibration mechanism in 2000*. Prior to that, Canon introduced the IS-20B anti-vibration adapter for portable zoom lenses. Those cutting-edge technologies, along with the Vari-angle Prism image stabilizer (VAP-IS) lens, helped to usher in the era of optical image stabilization in broadcasting lenses.

*Adopted for DIGISUPER 86 XS (XJ86 × 9.3 B). The world's first field zoom lens for broadcasting

Auto Focus

TTL Secondary Imaging Phase Difference **Detection Method**

The Secondary Imaging Phase Difference Detection Method, also used in single lens reflex EOS camera lenses, was adopted for broadcast autofocus systems. As a result of this Method, Canon's Auto Focus System has excellent focusing accuracy within the entire zoom range, along with outstanding focusing speed. Due to high performance servo motors, tracking a moving object at high speed can be possible even from a largely out of focus state.

■ Autofocus Two Types of Operation

AF Mode

Select DIGISUPER lenses provide two autofocus modes. "FULL TIME AF" provides continuous autofocus operation allowing the camera operator to focus on framing the subject. "PART TIME AF" allows for temporary autofocus use with manual focus. The modes can be switched on and off as needed, using the ACTIVE/ HOLD switch.

AF In-Focus Display

By using the FDJ - P41 dedicated focus demand, you can change the size (3 options) and position of the AF in - focus frame displayed on the viewfinder*.

* To change the in-focus frame, it is necessary to interlock with the camera.

Digital Technology

Digital Servo System/Digital Drive Unit

Since the release of the DIGISUPER 70 in 1995, Canon has been a leader in digital broadcast zoom lens control. Canon's ENG/ EFP lenses, having the same digital technology, offer a wealth of features to make shooting more efficient. Canon's digital drive unit is installed in all ENG/EFP and Provideo broadcast lenses.

■ Shuttle Shot

At the touch of a button, this feature allows the operator to zoom back and forth instantly between any two positions at the maximum speed or at any speed memorized in the Speed

Normal view angle A

Field of view of shuttle memory B

■ Frame Preset

With the Frame Preset feature, a preset frame position can be saved and repeated multiple times.

The angle of view B

■ Speed Preset

Simply press a button to recall the preset zoom speed.

■ Zoom Servo Characteristics

Zoom Servo Characteristics can be selected from nineteen curvature options on the ZDJ-G01 zoom demand.

Zoom Servo Characteristics Example

8 Broadcast Lens Technology Broadcast Lens Technology 9

Virtual Studio System

Canon has a series of HDxs and HDGC (IRSE/IASE version) lenses which are equipped with an enhanced digital drive unit. The digital drive unit's 16-bit encoder makes detection and output of positional information possible at a much higher resolution than an analog position sensor (equivalent to 10 bits). The 16-bit resolution rotary encoder built into the drive unit can be integrated into a virtual studio system. The encoders enable precise control as the zoom servo has a range of 0.5 second quick zooms to over a 5 minute super slow zoom. Repeatabilty in focus and iris control are also precise. Canon's technology has made the encoder device very small, allowing it to be installed in the existing drive unit without adding size or weight.

Further Improving Operational Efficiency

Type S Drive Unit

Canon has improved the operational efficiency of its lenses with the adoption of the Type S Drive Unit *1 .

- Matches the aberration correction function on the camera without initialization at power-on
- Reduced power consumption by about 10% *2 when using a battery as compared with previous versions
- Real and virtual images can easily be calibrated with highprecision position detection
- Three 20-pin connectors allow for simultaneous full servo and virtual system operation
- Easy operation with straightforward menu and display
- *1: Please refer to page 6, Understanding Canon Naming Conventions, Special Functions (2):
- *2: When zoom, focus & iris in operation.

■ Zoom Track

The zoom control range can be set within a more limited range on both the telephoto and wide-angle sides of UHD-DIGISUPER and DIGISUPER Series lenses. With these lenses and the optional ZDJ-P01 zoom demand, the zoom range can be set to virtually any range smaller than the full focal range of the lens. If not used to limit the zoom range, the feature can be used to memorize an additional preset zoom position.

Ergonomic Design

Compact and Lightweight Drive Unit

Canon's HDxs, and HDGC (IRSE/IASE models) Ergonomic Drive Units are tilted at an ideal angle of 12.5 degrees to realize good balance and comfort. An informational display has been added which now allows the user to customize the enhanced digital functions easily, precisely and fully. The enhanced digital functions are easily accessed and set using the Digital Function Selector, an X-Y axis switch located next to the display.

Ergonomic design allows the camera operator's left hand to easily access the focus ring for manual operation.

THE NEW ERA OF

NEW BCTV LENSES DESIGNED TO SUPPORT THE TRANSITION TO 4K UHD CONTENT CREATION

HDTV is now firmly established worldwide and HD production is expected to continue for many years to come. Ultra HDTV generally referred to as UHD - has more recently emerged as the next generation of enhanced television service. In 2015 the International Telecommunications union published their ITU-R BT.2020 standard "Parameter Values for UHDTV Systems for Production and international Program Exchange" - that included both 4K UHD and 8K UHD production formats. This standard includes a Wide Color Gamut (WCG). In 2016 they published the ITU-R BT.2100 standard "Image Parameter Vales for High Dynamic Range Television for use in Production and International Program Exchange". This standard specifically applies the High Dynamic Range (HDR) to the HD, 4K UHD, and 8K UHD production formats (all exclusively progressive scan). In September 2017 the industry body - Ultra HD Forum - published their updated Guidelines on technologies and practices that support a commercially deployable Ultra HD real-time linear service with live and pre-recorded content in 2016, which is termed a "UHD Phase A" service. They include 4K UHD and 1080P HD (that includes both HDR and WCG).

These standards and guidelines have spurred increasing attention to the adoption of 4K UHD origination of sports, concerts, and major events. The anticipated protracted coexistence of HDTV and UHDTV has spawned a new generation of 2/3-inch multi format broadcast camera systems – from most of the major international camera manufacturers – that can selectively originate HD or UHD. To support this new era of mixed HD / UHD origination Canon has invested heavily into the development of an array of 2/3-inch 4K UHD broadcast lenses that encompass long zoom field lenses, a studio lens, and a broadening family of portable lenses.

STUDIO / FIELD BOX LENSES			EFP / ENG PORTABLE LENSES

UHDxs	[4K]		UHD GC	4K	1080P/HDR/WCG	
OHDAS		1080P/HDR/WCG	HD xs	HD		
HD xs	HD		HD GC	HD		

Simplistic mapping of the performance levels within the separate categories of box lenses and portable lenses.

IMPLICATIONS OF HDR AND WCG

Delivering the requisite high image sharpness required for 4K UHD - while simultaneously lowering traditional optical aberrations (that can be more exposed by the high resolution image sensors) - called for multiple innovations in lens design and manufacturing. Lateral chromatic aberration causes color misregistration on high contrast edges within the imagery - especially toward picture extremities. Longitudinal chromatic aberration causes color fringing on any speculars with this imagery. HDR and WCG further enhance the visibility of these

ENHANCED HDTV AND UHDTV

aberrations - because of the elevation in the color volume of the camera video - placing a greater onus on suppressing them to where they become subjectively invisible.

To support HDR the lens must accurately reproduce scene speculars and minimize optical artifacts stimulated by strong scene highlights.

UHD LENS PERFORMANCE HIERARCHY

In the case of the large box field and studio lenses and the portable EFP/ENG lenses Canon has created two performance levels in each. A special priority is assigned to elevating image sharpness (the essence of 4K UHD). An attendant high priority underlies design strategies that aggressively curtail the visibility of the two chromatic aberrations. Higher luminance levels and allied greater color volume associated with HDR / WCG combine to elevate the visibility of even small levels of these chromatic aberrations.

In the case of the Box lenses advanced design strategies allied with advanced optical glass materials are mobilized to maintain high image sharpness across the image plane, over the total focal ranges, and over a wide range of object distances. The 4K PREMIUM box lenses take these strategies to a particularly high level to further tighten those optical performance specifications.

In the case of the portable lenses, similar priorities apply. The UHDxs manifests higher sharpness and lower chromatic aberrations when compared to the UHDgc - although on a different scale to the box lenses.

MULTI-GROUP ZOOMING SYSTEM

In seeking longer focal ranges for the box field and studio lenses and some of the longer focal length portable lenses, challenges in achieving the requisite zooming speeds while also achieving UHD performance were escalated. This called for a radical new design approach to the zooming optical subsystems. The central goals were to achieve greater control over multiple lens aberrations to help ensure full 4K performance while at the same time expediting an increase in the speed of the zooming action (when the digital drive unit is set to maximum zoom speed).

The traditional two group zooming system (right picture) is being replaced with a three group zooming system (left picture). Three movable groups move differentially with respect to each other over the zoom range. Design optimization consisted in balancing the weight of the three individual groups with their stroke distance during zooming action.

FLOATING FOCUSING SYSTEM

The focus optical subsystem entails high responsibility for numerous optical performance parameters and operational considerations. The lens maximum relative aperture is largely determined by the diameter of this lens input optical grouping. In addition, focus breathing (undesirable alteration to the field angle as the focus control is actuated) characteristics and aberration behavior are associated with this optical subsystem. Overall lens size and weight are heavily proportional to decisions made in the overall design of this system. Central to the design is curtailing the size and weight of the moving lens system. To help ensure UHD optical performance focus fluctuations must be suppressed – and this was accomplished by using two separate moving groups.

New innovations in a floating focus group support 4K UHD performance while curtailing size and weight

UHD-DIGISUPER 122: Highlights

High Zoom Ratio and Long Focal Length

Fulfilling the demands of professional broadcast demands, the UHD-DIGISUPER 122 lens combines a high zoom ratio with performance that surpasses 4K requirements.

Elimination of Image "Lag" Following Operational Pan/Tilt Movements

The image stabilization system must be capable of distinguishing between unwanted shake to the lens-camera system and deliberate operator movement of the camera.

In the UHD-DIGISUPER 122 lens, new correction methods have been implemented. As a result, the vibration component of the sensor detection signal and the panning operation component can be separated rapidly and with high accuracy.

Ideally Suited to 4K Shooting

The UHD-DIGISUPER 122 is ideal for high end live sports and broadcast programming due to it's exceptional optical performance that ensures it meets all 4K broadcasting requirements.

Air Sphere Coating (ASC) Technology

This is a Canon-developed technology that is an additional coating deposited on top of the normal multilayer coatings. By doing so, unwanted internal reflections which contaminate deep blacks and lower light transmission are minimized to deliver better image quality.

Canon UHD DIGISUPER 122 WASH STRANLERA 4K

Compatibility with HD Lens Systems

The lens enables the use of the same Canon standard controllers for zoom and focus as well as servo modules currently used by HD equipment. It comes with a 20-pin connector compatible with virtual units and that enables high-accuracy position information of the zoom, focus and iris to be read out.

Bokeh Effect Controller

When shooting in macro, the focus position of the UHD-DIGISUPER 122 can be changed as the focal length is adjusted, when using the optional MCJ-S02 Macro Controller. This built-in feature can be utilized to support special techniques in which the focus position can be shifted within the same shot just by using the Macro Controller, allowing for subtle creative defocus effects. This can help provide a degree of creativity when shooting live events such as a concert.

Control Accessories for Studio/Field Lenses

Zoom Demand

ZDJ-G01 ZDJ-S01

Main Features

Frame Preset/Shuttle **Shot/Speed Preset**

ZDJ-G01 ZDJ-S014

This function moves to a preset zoom position with the push of a switch. Frame preset and shuttle shot each moves at maximum speed, while speed preset moves at a preset speed. Letting go of the switch in shuttle shot returns to the original position. Moving speed with framing preset can be set with the ZDJ-G01.

⁴ Supports framing preset only

Normal view angle A

Shuttle memory angle B

Zoom Track

ZDJ-S01

Zoom control range can be set for both the wide angle and telephoto sides, to control zoom range required for actual shooting.

Other Functions

ZDJ-G01

ZDJ-G01

User settings can be registered and functions can be assigned to switches from the display screen. Preset speeds can also be set, and curves can be selected. Users can also check connection status and see whether various functions are on or off.

Control Accessories for Studio/Field Lenses

Zoom Curve

With zoom demand, the zoom curve (zoom speed curve characteristics according to thumb ring rotation angle) can be selected from provided patterns. The ZDJ-S01 features three types of zoom curves in total, while the ZDJ-GO1 offers a total of 19 types; from these, three types of curves can be assigned to the selector switch so users can set the optimum zoom curve for the shooting setting, such as studio recording or live sports.

Available Zoom Curves

Output Curve 00'

ZDJ-S01

This is the standard zoom curve available in the ZDJ-G01/ S01. Curve A offers a faster zoom speed with smaller thumb ring rotation angle, making it ideal for high-speed zoom operation. Curve B is the opposite of Curve A, making it useful for operation at lower zoom speeds. Curve S is midway between A and B.

Default setting on the ZDJ-G01

ZDJ-G01 **ZDJ-S01**

ZDJ-G01

Output Curve 09

This is an example of the selectable zoom curves available with the ZDJ-G01. This zoom curve is ideal for fine zoom operation at medium speed. Curve A gives more priority to fine zoom operation, while Curve B places greater emphasis on trackability. Curve S is similar to A in low speed ranges, and similar to Curve B in high speed ranges.

Curve Selection and Settings

Display Makes Curve Settings Simple and Clear

In line with Canon's aim to maximize operator comfort and convenience, a built in LCD screen on the ZDJ-G01 allows for easy selection of zoom curves as well as rocker direction. This allows operators to change curve settings to suit any changes in the operating environment on the fly.

ZDJ-G01 ZDJ-S01

ZDJ-G01 **ZDJ-S01**

Switch Curves Directly with Switch on Side of Unit Switch from among three zoom curves including the

assigned output curves according to the situation.

Control Accessories for Studio/Field Lenses

Focus Demand

FDJ-G01 FDJ-S01

Main Features

Focus Range Limit

Focusing within the required range is made possible by limiting the focus range to the subject's range of movement. This is effective for situations such as sports and stage events where subjects are restricted to a certain space and focus range is fixed to some extent.

Focus Preset

This feature lets users move from the current position to a predetermined focus position with the push of a switch. When released, focus returns to the position shown on the operation knob.

FDJ-G01

Fine Focus Mode 1/2

This function adjusts precision of focusing. Setting 1 sets a range and enables fine focusing within that range. Setting 2 enables fine focusing from the current focus position.

Other Features

User settings can be registered and functions can be assigned to switches from the display screen. Preset speeds can also be set, and curves can be selected. Users can also check connection status and see whether various functions are on or off.

Control Accessories for Studio/Field Lenses

Focus Curve

With the focus demand, the focus curve (focus position in relation to knob position) can be selected from provided patterns. The FDJ-S01 features three types of focus curves in total, while the FDJ-G01 offers a total of 19 types; users can switch between 9 types in Far mode and Near mode to choose the optimum focus curve for the shooting situation.

Available Focus Curves

Focusing within the required range is made possible by limiting the focus range (subject distance). This is effective for situations such as stage performances, where focus range is fixed to some extent.

Far Mode

This is the curve in which the focus position changes less the more the knob is turned toward the infinity side. This makes fine adjustments easy on the infinity side.

Standard Mode

This is the standard mode where focus position change is in direct relation to knob operation.

Near Mode

This is the opposite of Far mode, in which focus position changes less the more the knob is turned toward the close side. This makes fine adjustments easy on the close side.

With the ZDJ-G01, users can select from nine types of curves¹, numbered 1 through 9, in both Far mode and Near mode. The higher the number, the closer the curve is to a straight line. This enables fine curve adjustments for each shooting situation.

Curve Selection and Settings

FDJ-G01

FDJ-G01 FDJ-S01

Select using switch on side

of main unit

Display Makes Curve Settings Simple and Clear

The nine types² of focus curves in Far and Near modes can be assigned to the curve selector switch easily using the display.

Switch on Side of Unit Makes Selecting Faster

16 | Control Accessories for Studio/Field Lenses

¹ Far and Near modes cannot be selected independently.

The same curve number will be set.

² The initial value is set at 5

Users can switch between three assigned focus curves depending on usage situation.

FULL MANUAL SYSTEM

- *1: Switch Box is optionally available. The equivalent switches are integrated into Zoom Demands. It is recommended to have the Switch Box with Full Manual System
- *2: Lens Supporter is necessary for portable camera mounting. Some cameras need separate power supply for zoom and focus servo operation
- *3: For DIGISUPER 100AF, DIGISUPER 86AF, and DIGISUPER 27AF, FDJ-P41 is necessary to control the AF function, FDJ-P31 is also available for right hand users.
- Zoom Demand and Focus Demand with Pre-set Box is also available.
- For detail information, please contact a Canon Sales Office

Servo Module SMJ-E01 (2pcs)

Control Accessories for Studio/Field Lenses

For:

DIGISUPER 22 xs

The DIGISUPER 22 xs can be used with our current optional Studio/Field lens controllers as well as those for our ENG lenses. At the same time, the lens also offers compatibility with our Compact Studio/Field demands by use of a conversion cable.

The SUP-400 SUPPORTER is included as a standard component with the lens.

Studio/Field Lenses Mount Compatibility

To Use Camera Manufacturer's Original Mount Lens

Studio/Field lenses are made with mounts corresponding to each manufacturer's Studio/Field cameras. To make the lenses compatible with Portable Studio/Field Companion cameras, the correct lens Support System must be chosen from the following:

Please confirm with camera manufacturer regarding the proper supporter to use. Some manufacturers vary by camera model.

Mount Converters for Different Image Format Size Cameras

Canon offers a variety of Mount Converters to be used between a lens and a camera of different image format sizes. Each converter will extend the effective Angular Field of View of the associated lens according to the Shift Ratio listed below.

	Converter	Lens*4	Camera	Shift Ratio to Telephoto Side	Electronic Conversion	
	LO-32BMT	2/3" B4 Mount	1/2" Sony*5	Approx. 1.4x	N/A	
	LCV-40B	2/3" B4 Mount	1/2 Standard Mount ^{*6}	Approx. 1.4x	N/A	
	LCV-42T	2/3" B4 Mount	1/3" Standard Mount	Approx. 1.8x	N/A	
3.	LCV-41E	2/3" B4 Mount	Sony PMW-EX3	Approx. 1.4x	Lens Cable (12 pin) EX3 Hot Shoe (14 pin)	

^{*4:} The converters are to be used with lenses weighing less than 4.4 lbs (2.0kg), *5: Sony's Hot Shoe mount camera, excluding PMW-EX3.

Broadcast ENG/EFP, Pro Video Lens Optical Accessories

Converter/Attachments

TELE-SIDE CONVERTER

- The use of the telephoto converter would shift the focal length of a lens with a factor of 1.5x.
- F No. of the original lens is not affected.
- Only the telephoto side of the lens can be used. The picture corners are eclipsed at wide angle.
- The minimum object distance becomes 2.25x that of the original lens.

CHANGE IN FOCAL LENGTH

Model	M.O.D.	Eclipse Point		
CJ24ex7.5B	1.8m	f:100mm		
KJ17ex7.7B	1.35m	f:60mm		

FISH-EYE ATTACHMENT

- The zoom lens becomes a fish-eye fixed focal length lens (distorted image) with the fish-eve attachment.
- The use of a fish-eye attachment would shift the focal length of a lens with a factor
- Focus is adjusted by use of the macro

CHANGE IN FOCAL LENGTH

Model	Master Lens	With Fish-Eye Attachment		
CJ24ex7.5B	7.5-180mm	4.5mm		
KJ17ex7.7B	7.7-131mm	4.6mm		

WIDE CONVERTER

- The wide converter W80/W80Y-85 would shift the focal length of a lens with a factor of 0.8x.
- F No. of the original lens is not affected.
- The minimum object distance becomes 0.64x with the W80/W80Y-85.

CHANGE IN FOCAL LENGTH

Model	Master Lens	With Wide Converter
CJ24ex7.5B	7.5-180mm	6.0-144mm
KJ17ex7.7B	7.7-131mm	6.2-104.8mm

WIDE ATTACHMENT

- The zoom lens becomes a wider fixed focal length lens with the wide attachment.
- The use of the wide attachment would shift the focal length of a lens with a factor of

Focus is adjusted by use of the macro lever.

CHANGE IN FOCAL LENGTH

Model	Master Lens	With Wide Attachment		
CJ24ex7.5B	7.5-180mm	5.6mm		
KJ17ex7.7B	7.7-131mm	5.8mm		

POLARIZED LIGHT FILTER

- Used to intercept light reflected from the surface of water or glass.
- The polarizer is threaded on to a lens hood.

Extenders

- The X2.0-B4 extender mounts in between a camera and lens to magnify an image.
- The extender doubles the focal length of the master lens and doubles the F-number.

Model	Applicable Lenses
X2.0-B4	Applicable to all B4 type mount Canon 2/3" lenses.

[•] The number of each filter type name. indicates the screw diameter. Screw pitch: screw diameter 82 mm = 0.75 mm, thread diameter 127 mm = 0.75 mm, thread diameter other than the left = 1.00 mm

^{*6: 1/2&}quot; Camera of standard type mount (Panasonic, JVC, Grass Valley)

Broadcast ENG/EFP, Pro Video Lens Optical Accessories

Close-Up Lenses

- A close-up lens is used to shorten the M.O.D.* of the master lens for close-up shooting.
- The maximum object distance becomes the focal length of the close-up lens.
- The minimum object distance is calculated by the following formula: New minimum object distance = $fc \times S / (fc + S)$

fc = Focal length of the close-up lens S = M.O.D.* of the master lens

Recommended kit configuration.

CINEMA LENS LINEUP

ZOOM Series

Canon Cinema Zoom Lenses offer superb optical performance that achieves 8K resolution and are designed to meet the most demanding of high-end productions. They combine fluorite and aspherical lens elements, the latest in advanced optical coatings and superior lens designs for outstanding edge-to-edge image quality with minimal focus breathing.

CINE-SERVO Series

Canon Cine-Servo Lenses support cinema production as well as 4K content creation for broadcast. Featuring a servo drive unit, they can be ideal for shooting scenarios where speed and mobility are key. Covering an extreme range of 17mm-1000mm with three lenses, the Cine-Servo series are designed for the most demanding use cases.

SUMIRE PRIME Series

Canon is introducing a new line of cinema prime lenses named "Sumire Prime" (pronounced "Soo-mee-ray") associated with a floral gentleness and beauty. A unique optical design introduces a nuanced look as the lens aperture approaches its maximum setting - subtly modifying the textural renderings of the human facial closeup. It also smooths the transition to the fall-off portions of the scene resulting in a pleasing bokeh. This combination adds emotional expressiveness to a memorable scene.

PRIME Series

The well established series of Canon Cinema Prime Lenses offer spectacular 8K image quality and a full-frame image circle housed in lightweight and compact design. They feature high optical speed of up to T1.3 for some lenses and produce remarkably sharp 8K images. Focus breathing and geometric distortion are also tightly controlled in this high performance series of affordable prime lenses.

COMPACT ZOOM Series

Canon Cinema Compact Zoom Lenses offer 8K resolution in a remarkably small and light housing. Both lenses feature a constant T-number (2.8) throughout their zoom ranges as well as the latest advancements in lens design for outstanding image quality, controlled lens breathing and minimal distortion.

COMPACT-SERVO Series

The Compact-Servo series of lenses are aimed at users looking for the benefits of a cinema lens in a smaller and lighter package. Featuring cinema lens advantages such as stepless iris and geared focus rings, they are capable of high image quality in a smaller housing.

MEETING THE DEMANDS OF THE 4K ERA

Canon Cinema Lens Technology

Optical Performance

Crystal Clear Canon Optical Technology Super 35mm,* High quality 4K/HDR

From the center to the periphery of the image, Canon's cinema lenses achieve a high quality 4K HDR image with both our prime and zoom lenses. Canon's optical technologies are combined to help correct various aberrations and provide high contrast while achieving a high resolution of about 80 lines/mm throughout the entire range of our cinema lenses.

Focus Breathing Suppression

Focus breathing is caused when the focus group moves and exerts a "zooming" effect. In order to prevent this, cinema lenses implement a 3-group inner focus method and a new floating method to help minimize field angle fluctuation and achieve stable framing.

11 Blade Aperture

Halos from points of light at night or from rays of sunlight in shots that show the sun take on the shape of the Iris blades. The odd number of blades make the iris aperture look circular even when the Iris is contracted, enabling beautiful, round highlight bokeh.

Warm Color Balance

Cinema lens color balance, ideal for movie production, reproduces warm skin tones. Color balance is strictly uniform across all Canon cinema lenses making lens substitution during the same scene possible. Anti-reflection film technology, including super spectral coatings and thorough corrections for slight color variations caused by glass components allow Canon lenses to achieve this effect.

Flange Back Adjustment

A flange back adjustment mechanism is installed on the lens mounts to allow for back focus adjustments.

* Excluding PRIME Lens series.

■ Luminous Focus Markings

The Focus Scale on the front lens barrels is printed with luminescent paint to improve visibility at night and in dark studio conditions.

Dust/Splash Resistant Seals and Casing*

Our CN-E EF prime and Sumire Prime lenses use dust and splash resistant rubber gaskets at the casing joints.

* Lenses are not designed to be submersible in water or exposed to heavy rain.

■ Changeable Lens Mount

To adapt to the ever-changing requirements of content producers, Canon offers lens mount changing services for applicable lenses at our service centers. Kindly contact your friendly Canon representative for further details.

Sumire Prime

Nuanced Skin

Canon's Sumire Prime lenses offer a unique look in the Canon Cinema lens family on top of a native PL Mount. In addition to bright T-stops and Canon's renowned warm imagery, a unique optical design introduces a nuanced look as the lens aperture approaches its maximum setting subtly modifying the textural renderings of the human facial close-up. It also smooths the transition to the fall-off portions of the scene resulting in a pleasing bokeh. This combination adds emotional expressiveness to a memorable scene.

PL MOUNT

SUMIRE PRIME Lens Series: Highlights

Covers Full-frame, Super 35mm and APS-C Sensors

Sumire Primes cover the image circles of Large Format 35mm sensors, significantly increasing their ability to be paired with different cameras to achieve aesthetics that content creators desire.

Phosphorescent Indicators

To improve visibility in nighttime and dark area shooting, indicator markings with phosphorescent paint have been adopted for the front barrel (for right-side viewing).

Artistically Pleasing Image Rendering And Warm Colors

The original lens composition with large diameter aspheric lens and anomalous dispersion glass offers more solid and artistically pleasing image rendering. This brings out the impressive image quality of 4K cinema images in all their glory. And the warm color tones have been made consistent throughout the series to artistically pleasing canture people's facial expressions and enable better depiction of the subject's texture.

Minimized Focus Breathing

The lens controls focus breathing, which realizes stability in images even when bokeh effects occur due to refocusing.

Compact Zoom and Prime lenses have the same front lens diameter and consistent gear positions, so lenses within each series can be switched without adjusting the ria setup.

Unified Front Lens Diameter, Gear Position

Sumire Prime Lens Series

With the increased number of iris blades, users can get natural bokeh that appears more circular, from maximum to minimum aperture. The use of an odd number of blades diffuses light rays in high-brightness subjects and renders images more artistically pleasing.

Soft, Natural Bokeh Effects

The bright T-number of the Prime lens and multiblade iris diaphragm produce natural blur effects closer to a circle, from maximum to minimum aperture. This enables more three-dimensional bokeh even with super wide angle lenses that have deeper depth of field, broadening the range of visual expression.

PL Mount

PL mounts, which are in high demand in the cinema market, have been adopted to support a variety of cameras used in this market

ZOOM / COMPACT ZOOM Lens Series: Highlights

Easy-to-Read Controls

Focus Zoom and Iris markings are provided on angled surfaces. These markings are easy to read from behind the camera.

Support Industry-Standard Cameras

Covers Super 35mm and APS-C sensors.

Comfortable Usability

Control rings maintain the right amount of resistance while offering exceptional usability with consistent operating torque.

Inner Focus

Helps minimize focus-induced changes in the angle of view.

Marked on Both Sides

Lenses are marked on both sides. This makes markings visible from either side of the lens.

Switchable Unit for Focus Marking

The outer piece on marked focus rings can be switched from non-metric to metric labeling.

Attractive Bokeh

11-Blade Circular Aperture enables soft, beautiful background bokeh.

Unified Front Lens Diameter, Gear Position

Uniform gear positions within the same categories eliminate the need for accessory gear position adjustment when switching lenses.

Zoom Lens Series

Flange-Back Adjustment Mechanism

A covered flange-back adjustment mechanism is included, with broadcast applications in mind.

PRIME Lens Series: Highlights

Covers Full-frame, Super 35mm and **APS-C Sensors**

The lenses are also compatible with the large imaging area of cameras equipped with a fullsize 35mm-equivalent CMOS sensor.

Light, Compact

Small and light among many conventional cinema lenses, to meet a variety of shooting

Standard Accessories Supported

Supports industry-standard accessories such as nower-drive devices and matte hoxes

Accepts 105mm filters (except for 14mm)

PL or other individual filters 105mm in diameter can be attached to the end of the lens, enabling filter work in handheld shooting or other scenarios without using a matte box.

Phosphorescent Indicators

To improve visibility in nighttime and dark area shooting, indicator markings with phosphorescent paint have been adopted for the front barrel (for right-side viewing).

Consistent Torque

Control Rings maintain the right amount of

usability with consistent operating torque.

resistance while offering outstanding

Shallow Depth of Field and Low Light shooting are made easier with a fast aperture, allowing for creative freedom.

Prime Lens Series 11-Blade Iris

Unified Front Lens Diameter

Compact Zoom and Prime lenses have the same front

lens diameters, allowing for a single mattbox solution.

With the increased number of iris blades, users can get natural bokeh that appears more circular, from maximum to minimum aperture. The use of an odd number of blades diffuses light rays in high-brightness subjects and renders images more artistically pleasing.

EF Mount

EF Mount allows for communication functions with Cinema EOS Cameras. The ubiquitous EF mount is also an industry standard, ensuring compatibility across camera ecosystems.

Switchable Unit for Focus Marking

The outer piece on marked focus rings can be switched from non-metric to metric laheling

CINE-SERVO 50-1000mm: Highlights

Class Leading **Telephoto Focal Length**

S35 Image Circle

full frame image circle.

Focus Demands

Portable Lens Optimized for Field Usage

With 1.5 extender (75 - 1500mm) When extender is engaged, the lens covers a

Compatible with Broadcast Zoom/

CINE-SERVO 25-250mm: Highlights

- 8K Image Quality
- Medium Telephoto Lens in a Handheld Friendly Housing
- S35 Image Circle
- With 1.5 extender (37.5 375mm) When extender is engaged, the lens covers a full frame image circle.

CINE-SERVO 17-120mm: Highlights

- Wide Angle Lens With 7x Zoom Ratio
- 8K Image Quality
- S35 Image Circle
- Balanced for Handheld Shooting

Drive Unit

Removable Drive Unit

Canon CINE-SERVO lenses include a drive unit that provides the same user experience as found in our broadcast lenses. Removing the drive unit allows for full manual operation of the lenses.

■ No Initialization

Initialization of the drive unit is not required at power-on as compared to other conventional servo drive units. Immediate startup helps contribute to more efficient shooting.

Compatible With Standard Broadcast Demands Demand Supported

Compatible with Canon's standard broadcast industry demands such as ZSD-300D and FPD-400D. Canon's 8-pin demand* can be connected via a conversion cable.

Enables High-Precision, Natural Composition

Virtual Studio System

A high precision 16-bit encoder (zoom and focus only) makes connection to various virtual studio systems possible. Three 20-pin terminals allow a virtual connection even when zoom and focus demands are connected.

* Iris operation is also possible by connecting FDJ-P01 via conversion cable. It will be selected as either virtual output or iris operation

Peripheral Illumination Correction

EF Mount Communication Protocol Support¹¹

Information communication is possible via CINEMA EOS SYSTEM cameras and mounts. It is possible to record lens information at the time of shooting and peripheral illumination correction*2.

*1: ZOOM Lenses are excluded. Only EF mounted lenses are supported.

*2: Some lenses require a camera firmware update. Some lenses are scheduled to be handled by firmware update.

Supports Broadcast Industry Standards

12-Pin Serial Communication*

Supports 12-pin serial communication which is a broadcasting communication standard.

* Applicable lens: CINE-SERVO Lens series

It is necessary for the camera side to support 12-pin serial communication.

Supports Communication Standards of Film Production Industry

/i Technology Compatible*

Canon's PL-mount CINE-SERVO lenses are compatible with Cooke's "/i Technology" communication standard which has been widely adopted throughout the video production industry. Focus/zoom/aperture position data can be sent to the corresponding camera, recorded and displayed.

* Applicable lens: PL mount lens of CINE-SERVO Lens series only. The camera side must support /i Technology. Communication is possible when drive unit is installed

COMPACT-SERVO Lens Series: Highlights

Covers Super 35mm and APS-C Sensors

COMPACT-SERVO 4K

Image Stabilization

Focus Ring Supports 0.8 Gear Pitch Follow Focus Accessories

Minimized Focus Breathing

Compact and Lightweight for Increased Mobility

Enhanced Servo Drive Unit

- Servo Control Capability for Zoom, Focus, and Iris - Compatible with broadcast style servo lens
- Optional ZSG-C10 Grir

COMPACT-SERVO Lens

Accessories

ZSG-C10

• Rocker seesaw Start/Stop button • ONE-SHOT AF button • 20-pin cable *1 • Flexible mounting angle.

% Sold separately.

 \divideontimes Support strut, bracket, hex wrench included. *1: For connection to the lens body.

^{**} Lenses compatible with Super 35mm Sensor cameras.

*1: Aspect ratio 1.78:1, Screen size 24.6 x 13.8 mm. *2: Aspect ratio 1.9:1, Screen size 26.2 x 13.8 mm. *3: When using internal extender (1.5x). *4: When using the built-in extender.

^{*2:} Aspect ratio 1.9:1, Screen size 26.2 x 13.8 mm.

^{** 1:} Multiple controllers can not be connected at the same time (because there is only one connector). When installing the ZSG - C10 and enabling the operation on the grip side, you can not connect the external controller.

**2 For use in studio configurations, an optional Zacuto Z-CNYC. Y-cable can be used to connect zoom and focus controllers to each lens. This configuration allows for simultaneous zoom and focus operation with COMPACT-SERVO lenses.

**3 Some vignetting occurs when used in combination with RED's Epic system.

^{*} The optional Zacuto® Z-CNYC Y-cable allows for simultaneous use of zoom and focus controllers with both Compact-Servo lenses.
