TANGO PELICASE KIT

ART.NO 361

artno 351-10/12

The Tango Roller is the latest product from Prosup. It performs with purpose made, high quality wheels and roller bearings combined for optimum shock-free, smooth movement.

The Tango Roller is maintenance friendly and can be operated in any environment.

The lightweight roller system is ideal for camera packages up to 15 kg and can be used in both over- and undersling configurations.

For the central tripod configuration we recommend the use of two additional monopods, which are included in the set, to provide additional support at the ends of the 1.2M track.

All the sleepers are equipped with a 3/8" location hole for use with 28mm spigots, angle ball joints or 100mm half ball adapters.

The Tango Pelicase Kit includes a 1M and 1.2M track length, which is provided with a central tripod adapter, 1 Dolly, 2 Magnetic end stops, 3 Tango Floor Spreaders with leveling feet, 1 Universal Tiedown for any fluid head and 2 adjustable Monopods. Everything is packaged in a Pelicase with special hard foam. The whole package weighs no more than 22 kg.

The Pelicase provides space for an optional 100mm half ball, up to four 28mm spigots and a Mitchell/150 adapter plate.

There are even more useful accessories like angle ball joints, a 100<150 bowl adapter, undersling bracket and further lengths of 1.5M track, so the system can be extended endlessly.
